DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a process of depositing combustion and corona ions onto a substrate, classified in class 427, subclass 532.
- II. Claims 14-23, drawn to a combination flame and corona head, classified in class 219, subclass 121.36.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus of invention II could be used with the corona head on, while the flame is off and vice versa. Accordingly, the apparatus of invention II could be used for a process different from that of invention I where it is required that both combustion and corona ions are deposited.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
